The present sequence represents the hinge/Fc region of human IgGl, used in example 3 of the present invention. The recombinant vector is used for the production of authentic recombinant proteins of interest. The method of the invention is useful for the expression of fusion proteins capable of isolation by affinity chromatography in pro- or eukaryotic cells. This method allows for the efficient cleavage and generation of authentic proteins of interest that do not contain extraneous (i.e. non-naturally occurring)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence was used in the production of AGP-1 fusion proteins. AGP-1 is a type II transmembrane protein. The fusion proteins comprise an Fc immunoglobulin region fused to the N-terminal portion of the AGP-1 protein. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally induced disorders. The proliferative disorders

OPG negatively regulates formation of osteoclasts in vitro and in vivo. It blocks the differentiation of osteoclasts from monocyte or macrophage precursors and the reabsorption of bone. The OPG-Fc fusion protein is administered for the treatment of bone loss resulting from osteoporosis, Paget's disease, osteomyelitis, hypercalcaemia, osteopenia associated with surgery or steroid administration, osteonecrosis, bone loss due to rheumatoid arthritis, periodontal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for the prevention or treatment of lylic bone disease or multiple myeloma. Also the method can be used for preventing metastasis of cancer to bone or osteosclerotic bone metastasis. The method comprises administering an OPG (osteoprotegrin) polypeptide or OPG fusion protein. The OPG proteins (see AAB808905) can inhibit formation of osteoclasts (and thus bone resorption) by blocking differentiation from monocytes/macrophage precursors. The present sequence can be used to generate fusion proteins of OPG and immunoglobulin, for use in the present invention. The generated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Fig 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  haematocrit in a mammal. The method comprises administering a hyperglycosylated analogue of erythropoietin (Epo) in a pharmaceutical composition, less frequently than an equivalent molar amount of and at a lower molar amount than recombinant human Epo (rHuEpo) to obtain a comparable target haematocrit. Epo is a glycoprotein hormone necessary for the maturation of erythroid progenitor cells into erythrocytes. Human Epo analogue is useful for raising and maintaining haematocrit to a comparable target haematocrit in a mammal suffering from anaemia associated with a decline or loss of kidney function, myelosuppressive therapy comprising chemotherapeutic or anti-viral drugs or associated with excessive blood loss during surgical procedures, and in cancer condition. The present sequence is human immunoglobulin G (IgG) gamma 1 constant heavy chain (CH2, CH3) hinge region used to construct Epo

The yeast can be used for detecting or isolating the Fc part of immunoglobulin (1g)G. The yeast is useful for a stable supply of highly active catalytic antibody e.g. by screening novel functional molecules and in isolating Fc-carrying secretory proteins. The yeast of the invention is capable of adhering specifically to a combinatorial antibody library with an Fc-carrying antibody component. The current sequence represents the human IgG Fc fragment

                                                                                                                                        B
                                                                                                                                                                                                                                                                                                                                                                                                  designated zinfr12 (1) (1) has cytostatic, immunosuppressive, CC dermatological, antiinflammatory, neuroprotective, antidiabetic, CC antirheumatic, antiarthritic, antiasthmatic, nephrotropic and hypotensive activities, and can be used in gene therapy. (1) can be used for CC (e.g. ZTNF4), for treating disorders and diseases associated with B CC (e.g. ZTNF4), for treating disorders and diseases associated with B CC lymphocytes, activated B lymphocytes or resting B lymphocytes, and for CC inhibiting the proliferation of tumour cells. (1) is useful for treating CC autoimmune disorders such as systemic lupus erythematosus, mysthenia CC gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, crematoid arthritis, bronchitis, emphysema and end stage renal failure correnal disease such as glomerulonephritis, vasculitis, chronic lymphoid CC leukaemia, nephritis, and pyelonephritis, and for treating renal CC meoplasms, multiple myelomas, lymphomas, light chain neuropathy, or amyloidosis, hypertension, large vessel diseases, graft-versus host CC disease, graft rejection and Crohn's disease. (1) is useful for CC modulating the immune system, for regulating B cell responses and CC development, for modulating development of other cells, antibody CC production and cytokine production, and for modulating T and B cell communication. Human Ztnfr12 is located to chromosome 22q13.2. The present sequence represents homan immunosolobulin gammal constant region, which is useful for a promote from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a fusion peptide which consists of the extracellular domain of a mammalian oxidized LDL (low density lipoprotein) receptor, fused to a partial heavy chain of a mammalian immunoglobulin containing all or part of the constant region. Oxidize LDL is a denatured form of LDL occurring in patients having arteriosclerosis or hyperlipidaemia, and the fusion peptide can be used for the assay of oxidized LDL in biological samples from such patients, for the diagnosis of the disorders. It can also be used therapeutically for the prevention and treatment of arteriosclerosis hyperlipidaemia. The present sequence represents the protein from the vector DNA of pcd3inegl comprising human IgGI Fc region genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-JUL-1999

                                                                                                                                                                                                                                                                                                              This sequence represents a fusion protein which comprises the mouse heat shock antigen (HSA) fused to human IgG1 Fc. This protein may be used in the method of the invention for inhibiting destruction of tissue initiated by autoreactive T cells (GATC). The method is especially used to treat subjects suspected of having autoimmune diseases, particularly multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus, psoriasis, diabetes and allergy, also transplant rejection. Transgenic mice that express human CD24 on their T cells are useful as models for testing drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chimeric -

                                                                                                                                                                                                                                                                                                                                                               The gene coding for human alkaline phosphatase is fused downstream of a gene coding for either the variable and CHI regions of an antibody heavy chain or an antibody light chain. Coexpression of the H- and L-chain sequences, one of which is fused to the AP gene, results in production of AP-labelled antibodies suitable for use in immunoassays. The present sequence is from a human IgG heavy chain constant region.

                                                                                                                                                                                                                                                                                                                                                                      considered the presence of a test ligand and comparing levels of activity of mouse zcytor10 protein by culturing the cells in the presence of a test ligand and comparing levels of activity of mouse zcytor10 cc in the presence and absence of the test sample. Similarly, detection of zcytor10 receptor ligand within a test sample can be achieved. Cc for method comprising contacting a test sample containing an amino cc acid sequence from Cysls or Gly25 to pro230 of the zcytor 10 cc cytokine receptor and detecting the binding of the polypeptide to a cligand in the sample. Specified peptide fragments of the zcytor 10 cc ytokine receptor and the methods described are used to identify cligands that stimulate the proliferation and/or development of the cytokine receptor and myeloid cells. Peptide fragments of the cytokine receptor are useful for treating lymphoid, immune, inflammatory, splenic, blood or bone disorders and for generating cc secreted human zcytor 10 heterodimer is constructed. In this construct the extracellular cytokine binding domain of zcytor 10 cc is fused to the heavy chain of IgG gamma and the extracellular cytokine receptor subunit (an interlakin receptor subunit is fused to human kenna light
                                                                                                                                                                                                                 Query Match

                                                                                antidiabetic, nephrotropic, dermatological, anti-HIV and haemostatic activities, and can be used in vaccines. (I) or an antibody binding (I) can be used for suppressing the immune system for reducing rejection of tissue or organ transplants and grafts and for treating T-cell specific leukaemias or lymphomas and autoimmune diseases including rheumatoid arthritis, multiple sclerosis, diabetes mellitus, inflammatory bowel disease and Crohn's disease. The antibodies can also be used for treatin immunologic renal diseases, glomerulonephritis, mesangioproliferative disease, chronic lymphocytic leukaemia, secondary glomerulonephritis or vasculitis associated with lupus, polyarteritis, scleroderma, HIV-relate diseases, amyloidosis and haemolytic uraemic syndrome. (I) and the antibodies can also be used for renal or urological neoplasms and multiple myelomas, asthma, bronchitis, emphysema and other chronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a cytokine receptor designated zcytor17. 
Czytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, 
cantirheumatic, antiarthritic and muscular activities. The zcytor17 
cz antirheumatic, antiarthritic and muscular activities. The zcytor17 
cz proteins are useful for treating and diagnosing lymphoid, immune, 
cz inflammatory, spleenic, blood or bone disorders. Agonists or 
canti-zcytor17 antibodies are useful in stimulating cell-mediated 
cz inmunity and for stimulating lymphocyte proliferation, such as in the 
cz treatment of infections involving immunosuppression, including certain 
cz vital infections. They are also useful for inducting cytotoxicity and 
cz treating leukopenias. Antagonist of zcytor17 polypeptides are useful 
cz for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple 
cz clerosis), inflammatory diseases (e.g. Czohn's disease), cancer, 
cz chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to 
Canaba93843 and ABB05730 to ABB05745 represent sequences used in the

The immunoadhesin binds to HRV and reduces its infectivity, competing with cell surface ICAM-1 for binding sites, interfering with virus entry or uncoating and directing premature release of viral RNA and formation of empty capsids. Expression of the immunoadhesin in plants would be tetrameric, rather than dimeric. Immunoadhesin having multiple binding sites have a higher effective affinity for the virus, thereby increasing the effectiveness of the immunoadhesin. Association of secretory component and immunoglobulin J chain increases the stability of the immunoadhesin in the mucosal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    environment. Production is significantly less expensive in plants than animal cell culture and production in plants is safer for human use, since plants are not known to harbor any animal viruses. The present sequence is that of a human immunoglobulin protein sequence, useful to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (b) optionally a J chain and secretory component associated with the chimeric ICAM-1 molecule. The immunoadhesin has plant-specific glycosylation and virucide activity. The immunoadhesin is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Fig 7; 138pp;
